- AB - DE19934249 The occupant protection arrangement has an inflatable cushion (20) that is inflated if an excessive vehicle deceleration occurs to protect a vehicle occupant against injury. The cushion consists at least partly of a foil (12) that adopts a predefined shape when inflated to increase its area.
- The foil is of non-uniform thickness that determines the shape when inflated.
 - USE - Esp. for motor vehicle.
 - ADVANTAGE - Offers high degree of protection with simple design.
